Catapy - A Toy Car Covered by a Caterpillar Track (11270N)

A palm-size battery-powered toy car covered by a caterpillar track that is able to run freely in and off-road in regular and irregular surfaces. Catapy can overcome obstacles by automatically changing directions after colliding and bouncing off them. Catapy can be combined to create more exciting configurations that retain the properties of its individual components.

GeoVid: Methods for Sensor-Rich Video Management (11119N)

The GeoVid system tags with sensor properties (meta-data) camera scenes during recording. Collected and correlated meta-data are then utilized for storing, indexing, searching, handling and presenting large collections of videos in novel and useful ways. Videos with meta-data can be better managed, searched and presented. The current GeoVid system implementation demonstrates a system that consists of several acquisition applications for mobile devices and a sample video search portal.
